셤 ò . 점 δ 셤 ò g involved in plant resistance or response to pathogenic infection. Mi comprises identifying a gene whose expression is significantly altered in the incompatible interaction of plant gene expression relative to expression of the gene in an uninfected plant, in a mutant plant that does not express a gene associated with response to pathogenic infection, or in a corresponding incompatible interaction. (MI) is useful for conferring resistance to resistance or tolerance to a plant to bacterial, fungal or viral infection. The present sequence was used to illustrate the invention. ä t t GATGGCGGGGGCCGGCTATGATGTTCACGCACAGTACAAGTTCCTCTGTATCCACCGTGA 202 322 442 GYMSRMAMMYKKMYHYRGYKGWKRGWHAGRNMMRSMCRWSKACYYNRWRMRMTRRRRWA 376 323 ACGGTTTGCATTCGAGCCCCTCGGTTCCCTGACGGAACGAAGGATGATCCATTCAACAC 382 Identifying at least one gene involved in plant resistance or response pathogenic infection for conferring resistance or tolerance to a plant bacterial, fungal or viral infection by determining or detecting plant TCATCTCACACGCTTCGGACTTCCTTTCGAGCTGAGCTTCAATTACTCCAAATCACTACT | : | :: : : | : : | : : | : : | : : | SCGRSGCGRRSAYSRYYGTSRKYGTYXSASRC--MRAYMTTSYSWACSSYTWCRS GGTCATCATCCCGGCGTTGGGTCCATACCCAGAAAAGGGTCAGCCCATGCACTGGAAGAG KRESIMIWKIMIRKIMIRRSYGWYSWSYKMWCTAYKKSYYSRWCYMYRGGGWRGATRYWGR ATGGTTCGATCATTTCACTAAAGCATTGGTCGTTTCGGAGGAAGAGGCTCGGACTCTGCT CCAGGCAATCAGGCCTGTTCTCCAGGACCTCAAGGCCATGGTTCCAGGGCTTGACCTGGA Gaps ΰ 5 Sequence 2000 BP; 336 A; 265 C; 284 G; 363 T; 0 U; 752 Other; DB 7; Length 2000; Hon SA, Hor Zhu I, Query Match 2.8%; Score 38.8; DB 7; Length 2 Best Local Similarity 7.7%; Pred. The invention relates to an isolated nucleic acid comprising any one of the 613 antisense sequences given in the specification where expression of the mucleic acid inhibites proliferation of a cell. Also included are:

(1) a vector comprising a promoter operably linked to the nucleic acid concoding a polypeptide whose expression is inhibited by the antisense polypeptide or its fragment whose expression is inhibited by the antisense collypeptide or its fragment whose expression is inhibited by the antisense nucleic acid; (4) an antibody capable of specifically binding the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular proliferation, or the activity of a gene in an operon required for proliferation, or that has an activity against a biological pathway required for proliferation, or that inhibits cellular proliferation; (8) identifying a gene required for cellular proliferation or the biological pathway required for proliferation, or that inhibits cellular proliferation; (8) identifying a gene required for cellular proliferation or the biological pathway in which a proliferation-required gene or the biological corputation and antibiotic; (10) profiling a gene acts; (9) manufacturing an antibiotic; (10) profiling a

Ellis CE;

Novel isolated nucleic acid molecule associated with cancerous state of prostate cells and correlating with presence of prostate cancer, useful for detecting presence of prostate cancer.

WPI; 2001-662795/76

Claim 1. Dace 2486. 11750nn. Fraish

The sequence represents the coding sequence of Cynomolgous monkey calcium sensing receptor. The calcium sensing receptor nucleic acid and polypeptide are useful for treating bacterial, fungal, protozoan and viral infections, particularly infections caused by HIV-1 or HIV-2, pain, cancer, diabetes, obseity, anorexia, bulimia, Parkinson's disease, acute hart failure, hypotension, hypertension, urinary retention, erroke, ulcers, esteoporosis, angina pectories, myocardial infarction, stroke, ulcers, asthma, allestgies, banian prostatic hypertrophy, migratine, voniting, psychotic and neurological disorders including and severe mental manic depression, depression, delirium, dementia and severe mental retardation, and dyskinesias, such as Huntington's disease or Gilles de la Tourette's syndrome. The polypeptide is useful for structure-based design of agonist, antagonist or inhibitor of the calcium-sensing crecardation, and payence is useful for chromosome localisation studies. The polypeptide and nucleic acid are also useful as vaccines. (Updated on 1-SEP-2003 to standardise OS field) Novel Cynomolgous Monkey Calcium-Sensing Receptor polypeptides are useful for treating infections, pain, cancer, diabetes, obesity, asthma, schizophrenia, hypertension, urinary retention, Parkinson's disease and Claim 1; Page 27-28; 38pp; English. stroke

The invention relates to an isolated mucleic acid comprising any one of the 6213 antisense sequences given in the specification where expression of the mucleic acid inhibites proliferation of a cell. Also included are:

(1) a vector comprising a promoter operably linked to the nucleic acid encoding a polypeptide whose expression is inhibited by the antisense mucleic acid; (2) an entisoned expression is inhibited by the antisense mucleic acid; (4) an antibody capable of specifically binding the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular proliferation or the activity of a gene in an openon required for proliferation or that has an activity against influences the activity of the gene product or that has an activity against influences the activity of the gene product or that has an activity against acid; (8) identifying a compound that inhibits proliferation, (8) identifying a gene required for cellular proliferation or the biological pathway in which a proliferation-required gene or its gene product lies or a gene on which the test compound that inhibits proliferation of an organism acis; (9) manufacturing an antibiotic; (10) profiling a compound, a activity; (11) a culture comprising strains in which the gene product is overexpressed or underexpressed; (12) determining the extent of compound's activity; (11) a culture comprising strains in which the gene product is overexpressed or underexpressed; (12) determining the extent of the strains or classed proteins or collection of an organism. The antisense nucleic acids are useful for the printed specification in cells other than S. aureus, S. typhimurium, K. preumoniae or P. aeruginosa. The present sequence is one of the target of not form part of the printed specification, but was obtained in cellectonic ormat directly from WHO at the content of the printed specification, but was obtained in cellectonic ormat directly from WHO at the printed pot expendences. screening Zyskind JW; Xu HH; New antisense nucleic acids, useful for identifying proteins or s for homologous nucleic acids required for cellular proliferation isolate candidate molecules for rational drug discovery programs. US-09-18-657-3
; Sequence 3, Application US/09518657
; Patent No. 6335188
; GENERAL INFORMATION:
; APPLICANT: Schardl, Christopher L.
; APPLICANT: Wang, Jinghong
; TITLE OF INVENTION: Endophyte Ergot Alkaloid Synthetic Compounds
; TITLE OF INVENTION: Endophyte Ergot Alkaloid Synthetic Compounds
; TITLE OF INVENTION: Which Encode Therefor and Related Methods
; TITLE OF INVENTION: Which Encode Therefor and Related Methods
; CURRENT PELIGATION NUMBER: 80/9/518,657
; CURRENT FILING DATE: 1999-03-22
; NUMBER OF SEQ ID NOS: 6
; SOFTWARE: PatentIn Ver. 2.1
; SEQ ID NO 3
; LENGTH: 1353
; TYPE: DNA

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          à
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence 6, Application US/09518657

Sequence 6, Application US/09518657

Patent No. 6335188

GENERAL INFORMATION:

APPLICANT: Schard1, Christopher L.

APPLICANT: Wang, Jinghong

TITLE OF INVENTION: Malch Engot Alkaloid Synthetic Compounds,

TITLE OF INVENTION: Which Engot Alkaloid Synthetic Compounds

TITLE OF INVENTION: Which Engot Alkaloid Synthetic Compounds

TITLE OF INVENTION: Which Engot Alkaloid Synthetic Compounds

CURRENT APPLICATION NUMBER: US/09/518,657

CURRENT FILING DATE: 2000-03-03

EARLIER APPLICATION NUMBER: 06/125,490

EARLIER FILING DATE: 1999-03-22

NUMBER OF SEQ ID NOS: 6

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

organ cDN library was generated using the ZAP-cDNA method
by Stratagene. First strand cDNA synthesis was primed with
a a 50 bp linker primer containing an oligo dT sequence
preceded by a synthetic Xno site. S prime adaptors were
used containing an EcoRl cohesive end. The finished CDNAs
were inserted in to the ZAP express vector
uniditactionally in the sense orientation with respect to
the lacz promoter of pBK-CMV. An amplified library was
prepared from approximately 3 million primary clones in
the lambda ZAP Express vector. In vivo excision was then
used to generate individual pBK-CMV phagemid clones for
EST sequencing."

Producing a polypeptide of interest such as a hormone or enzyme, comprising cultivating a mutant of a parent Aspergillus cell which produces less of at least one toxin of interest compared to the parent cell under the same conditions.

Claim 34; Page 61-62; 66pp; English.

The A. oryzae dimethylallyl-cycloacetoacetyl-L-tryptophan synthase (DCAT-S) is involved in the synthesis of beta-CPA, from cyclo-acetoacetyl-L-tryptophan and dimethylallylpyrophosphate, by its homology to a dimethylallyltryptophan synthase (DMAT-S) from Claviceps purpurea. Aspergilus host cells having a modification in the DCAT-S gene, leading to reduced or eliminated toxin production, are useful for expression of heterologous polypeptides of interest. Other toxins which may be reduced or eliminated comprise kojic acid, 3-nitropropionic acid, emodin, etc. The DCAT-S gene can be used to identify and disrupt similar genes in

~

(DmaW

```
The invention describes an isolated dimethylallyltryptophan synthase (dmaw) nucleic acid (I). (I) is a Dmaw sequence from epiphyte fungi Neotyphodium coenophialum symbiont of commercially significant grasses and is useful for expressing Dmaw in a cell by recombinant techniques. (I) is also useful for: identifying endophytes e.g. from commercial plants used in forage, pasture, tuff, land recolamation and soil conservation that contain or lack a Dmaw gene and producing increased amount of ergot alkaloids involving expressing (I) in a host fungal cell so that the copy number of many derived from transcription of the nucleic appropriate growth conditions, thus causing increased production of ergot alkaloid. Probes derived from (I) are useful for identifying Neotyphodium or Epichloe that lack Dmaw and therefore are unlikely to produce ergot alkaloids. The primers are useful for amplifying segments of Dmaw from fungi in family clavicipitaceae. (I) is also useful for identifying related sequences such as from Balansia, Balansiopsis, Echinodothia, Arkinsonella, Myriogenospora, Neotyphodium, and Parepichloe, or natural or induced mutants. A knockout construct of (I) endicient fungal symbionts (endophytes of plants). This is the amino acid sequence of fungal symbionts (endophytes of plants). This is the amino acid sequence continue.
                                              New isolated nucleic acid encoding dimethylallyltryptophan synthase molecule) from fungi that are symbionts of commercially important grasses, useful to engineer ergot alkaloid-deficient symbionts.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Query Match 39.1%; Score 907.5; DB 5; Length Best Local Similarity 41.3%; Pred. (1) is a Dmaw sequence from epiphyte fungi Nectyphodium coenophialum symbiont of commercially significant grasses and is useful for expressing Dmaw in a cell by recombinant techniques. (1) is also useful for: identifying endophytes e.g. from commercial conservation that contain or lack a Dmaw gene and producing increased amount of ergot alkaloids involving expressing (1) in a host fungal cell conservation that contain or lack a Dmaw gene and producing increased amount of ergot alkaloids involving expressing (1) in a host fungal cell so that the copy number of mRNA derived from transcription of the nucleic acid molecule is increased, allowing the host fungal cell to growth conditions, thus causing increased production of ergot alkaloid. Probes derived from (1) are useful for identifying Nectyphodium or Epichloe that lack Dmaw and therefore are unlikely to produce ergot alkaloids. The primers are useful for amplifying segments of Dmaw from fungi in family Clavicipitaceae. (1) is also useful for identifying related sequences such as from Balansia, Balansiopsis, Echinodothis, Atkinsonella, Myriogenospora, Nectyphodium, and Echinodothis, Atkinsonella, Myriogenospora, Nectyphodium, and Echinodothis, Atkinsonella, Myriogenospora, Nectyphodium, and Echinodothis, Atkinsonella, Myriogenospora, Nectyphodium, and Echinodothis, Atkinsonella, Myriogenospora, Nectyphodium, and Echinodothis, Atkinsonella, Myriogenospora, Nectyphodium, and Echinodothis, Atkinsonella, Myriogenospora, Nectyphodium, and Echinodothis, Atkinsonella, Myriogenospora, Nectyphodium, and Echinodothis, Atkinsonella, Myriogenospora, Nectyphodium, and Echinodothis, Atkinsonella, Myriogenospora, Nectyphodium, and Echinodothis, Atkinsonella, Myriogenospora, Nectyphodium, and Echinodothis, Atkinsonella, Myriogenospora, Nectyphodium, and Echinodothis, Atkinsonella, Myriogenospora, Nectyphodium, and Echinodothis, Atkinsonella, Nectyphodium, and Echinodothis, Atkinsonell New isolated nucleic acid encoding dimethylallyltryptophan synthase (DmaW molecule) from fungi that are symbionts of commercially important grasses, useful to engineer ergot alkaloid-deficient symbionts. This invention relates to novel nucleotide sequences which encode proteins which have lipoxygenase activity. Lipoxygenases are membrane bound ubjuditous enzymes which catalyse the hydroperoxidation of polyunsaturated fatty acids in the first step of fatty acid metabolite synthesis. Products of this pathway are found as signal molecules involved in growth and development regulation. A knowledge of the amino acid sequence of lipoxygenases may allow the understanding of plant development and wound response. The polynucleotides, polypeptides and nipoxygenases of the invention may therefore be useful in genetic mapping and particularly for catalysing hydroperoxidation of polyunsaturated fatty acids. The present sequence is the amino acid sequence of the Balsam pear (Momordica charantia) lipoxygenase protein 2 of the invention
                                                                                                                                                                                                                                                                                                    24;
                                                                                                                                                                                                                                                                                                                                                                    277

as a vaccine Novel isolated polypeptide of nucleotide binding site useful as a vac for preventing or treating diseases e.g. cancer, stroke, Alzheimer's disease, Parkinson's disease, myocardial infarction, Crohn's disease.

Claim 12; Fig 9A-C; 149pp; English

The present sequence is that of novel human NBS-4, as deduced from a partial cDNA clone (see AAI70682). The sequence is predicted not to be till length. The human NBS-4 protein has a mucleotide binding site, which is present in a number of proteins that transmit signals which activate is present in a number of proteins that transmit signals which activate apoptotic and inflammatory pathways in response to stress and other critch repeat domain (LRR), which is also present in proteins involved in apoptotic and inflammatory pathways, and a pyrin domain. The inrention provides NBS-2, NBS-3, NBS-4 and NBS-5 nucleid scee AAI70680-85) and polypebtides (see AAM50325-30), as well as modulators of NBS-2, NBS-4 and NBS-5 activity or expression. These are expected to be provides NBS-4 and NBS-5 activity or expression. These are expected to be useful in diagnosis of such disorders and in screening assays used to identify modulator compounds. The inflammatory diseases and inflammatory consequences. The nucleic acids and polypeptides are also expected to be useful in diagnosis of such disorders and in screening assays used to identify modulator compounds. The inflammatory diseases and diseases and disease, conteact dermanials. Including an arthritis, including Lyme disease, conteact dermatilis, psoriasis, graft rejection, graft versus host disease, canced teamatilis, psoriasis, graft rejection, graft versus host disease, sarcoidosis, atopic conditions, such as asthma and allergy, and bacterial (e.g. tuberculosis and lepromatous leprosy). Apoptotic and bacterial (e.g. tuberculosis and lepromatous leprosy). Apoptotic glosorders such as systemic lupus expthematosus, immune-mediated diseases and architis and arthritis, as well as neurological diseases and autorimmune collections, retinitis pigmentosa and Huntington's disease, and unclonged disease, and continued disease, and architis pigmentosa and Huntington's disease, and contropining allateners of disease, partinum and plantic and arthritis pagmentos and Huntington's disease, and myelodysplastic syndromes

New DNA encoding protein with pyrin domain, useful for treating diseases involving impaired signal transduction, particularly inflammation, also proteins and antibodies.

Claim 5; Fig 1; 116pp; German.

The present invention relates the DNA and their encoded proteins, where the proteins contain at least one PYD (pyrin) domain. These can be used to treat diseases associated with impaired intracellular signal transduction, particularly inflammation such as psoriasis, arteriosclerosis, bacterial or viral infections (particularly meningitis and pneumonia), multiple sclerosis, rheumatoid arthritis, asthma, sarcoidosis, glomerulonephritis and osteoarthritis, and also Alzheimer's and Parkinson's diseases. The present sequence is a protein of the

The invention describes an isolated NOVX polypeptide (I) comprising a sequence selected from a sequence (S1) of 1121, 635, 239, 1720, 176, 583, 214, 395, 1308, 134, 427, 136, 407, 806, 804, 1253, 382, 1056, 284, 496, 506, 759, 390, 135, 240, 1069, 116, 439, 1138, 477, 316, 269, 219, 506, 759, 300, 313, 215, 240, 1069, 116, 439, 1138, 477, 316, 269, 219, 506, 759, 300, 365, 829 or 326 amino acids fully defined in the specification, and the mature form of S1. (I) is useful for treating or preventing a pathology associated with (I) in a subject, preferably human, or for identifying an agent that binds to (I), where the agent is a cludiar receptor or a downstream effector. (I), a polymuleotide (II) encoding (I) or an anti-(I)-antibody (V) is useful treating or preventing disorders or syndromes such as autoimmune disease, allergies, Alzheimer's classase, stroke, Parkinson's disease, Huttington's disease, multiple sclerosis, addiction, anxiety, pain, delecters, glomerulonephritis, systemic lupus erythematosus, athema, soleroderma, graft versus host disease, pancreatitis, obesity, ulcers, anaemia, cancer, trauma, viral, hypertension, acquired immunodeficiency syndrome (AIDS) or Crohn's disease. (I), (II) or (V) is useful in screening assays, detection assays conclude of a copy, to express trials and pharmacogenomic), and in methods of treatment (e.g., trials and prophylactic). (II) is useful in gene therapy, to express the amino acid sequence of a novel human way to modulate NoVX mana a genetic lesion in a NoVX gene, and to method and prophylactic). (II) is useful in a gene therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      233
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          79 MHWKSHL---TRFGLPFELSFNYSKSLLRFAFEPLGSLTGTK-DDPFNTQAIRPVLQDLK 134
